Algebra and Number Theory: Proceedings of a Conference ...

This study demonstrates the key manipulations surrounding Brauer groups, graded rings, group representations, ideal classes of number fields, p-adic differential equations, and rationality problems of invariant fields – displaying a command of the most advanced methods in algebra. It describes new developments in noncommutative valuation theory and p-adic analysis.

Algebra and number theories have always attracted the human mind, stimulated man's curiosity, and have significantly contributed to forging the mathematical disciplines that pervade every aspect of modern life. Although it is difficult to foresee the future domains of application of aimless pure mathematical discoveries, today's dominating fields are information theory and cryptography.

This volume contains refereed and updated versions of papers presented at the International Conference on Algebra and Number Theory held on the occasion of the silver jubilee of the School of Mathematics and Computer/Information Science at the University of Hyderabad, India. There are three survey articles on the cyclicity problem for division algebras, one on Ramanujan graphs and supplementary zeroes of p-adic L functions of modular forms. Three articles announce results, which ...
