Api Standard 521 For Pressure

API Standard 521, Pressure-Relieving and Depressurizing Systems, provides guidance, recommendations, and alternatives for the design of pressure-relieving and vapor depressurizing systems at liquefied natural gas terminals, petrochemical facilities, gas plants, and other petroleum production facilities.

API STD 521, 7th Edition, June 2020 - Pressure-relieving and Depressuring Systems This standard is applicable to pressure-relieving and vapor depressuring systems. Although intended for use primarily in oil refineries, it is also applicable to petrochemical facilities, gas plants, liquefied natural gas (LNG) facilities, and oil and gas production facilities. The information provided is designed to aid in the selection of the system that is most appropriate for the risks and circumstances ...

API has published the 7th edition of API Standard 521 for use in addressing risks of overpressurisation at refineries and a wide range of other facilities. The standard provides guidance, recommendations and alternatives for the design of pressure-relieving and vapour de-pressuring systems to be used at LNG terminals, petrochemical facilities, gas plants and other petroleum production facilities.

The API method is empirical based on tests performed in the 1940's. There is increasingly widespread interest in analytical methods based on heat transfer principles to model fire heat input. The API committee agreed to include an analytical method in the 6th edition of API Standard 521 to establish relief loads for pressure relief devices and to design depressuring systems for the fire scenario. The analytical method provides more flexibility than the empirical method but has limitations (e ...

API-521: Guide for Pressure relieving and Depressuring Systems Petroleum petrochemical and natural gas industries—Pressure relieving and depressuring systems: This API standard specifies requirements and gives guidelines for determining overpressure causes, relieving rates for pressure relieving and vapor depressurizing systems in petroleum related industries. The standard also discusses selection and design of disposal systems, including such component parts as piping, vessels, flares ...

At some point, the pressure reaches the set pressure of the pressure relieving valve, and it will open. If properly sized, the relief valve will protect against further increases in pressure. The API standard 521 provides guidance for the sizing of a PRV for a gas-filled vessel [3].
