AP BIOLOGY EVOLUTION ACTIVITY #2	NAME _____ DATE _____ HOUR _____
--	-------------------------------------

SPECIATION

SPECIATION

Origin of new species

Allopatry – Geographical Isolation

Populations in groups of populations whose members have the potential to interbreed and produce fertile offspring

REPRODUCTIVE BARRIERS

PREZYGOTIC:

Barriers that prevent fertilization

Geographical isolation

Populations can't get together

Behavioral isolation

Different mating behaviors

Temporal isolation

Breeds at different times

Mechanical isolation

Different anatomical structures

Genetic isolation

Genes fail to fuse; don't recognize each other

SPECIATION-Origin of Species - Serrano HS AP Biology

Speciation Simulator 2.0 is a simple web-based computational biology application designed to mimic patterns of biological evolution. In nature, new species arise and adapt as a result of natural selection acting upon a gradual accumulation of spontaneous genetic mutations over successive generations. Mutations to the sexual reproduction cells of an organism are most important in terms of biological evolution.

These are the types of cells that are necessary for changes to occur and play a ...

Speciation Simulator 2.0

La spéciation est, en biologie, le processus évolutif par lequel de nouvelles espèces vivantes se forment à partir d'ancêtres communs.. Les espèces s'individualisent à partir de populations appartenant à une espèce d'origine (sauf exception pour certains végétaux). Une espèce, au sens du concept biologique d'espèce, est définie comme ayant une communauté d'ascendance au sein de ...
