

Very Short Answer Type Questions

1. Molecules in air in the atmosphere are attracted by gravitational force of the earth. Explain why all of them do not fall into the earth just like an apple falling from a tree.
2. Give one example each of central force and non-central force.
3. Draw areal velocity versus time graph for mars.
4. What is the direction of areal velocity of the earth around the sun?
5. How is the gravitational force between two point masses affected when they are dipped in water keeping the separation between them the same?
6. Is it possible for a body to have inertia but no weight?
7. We can shield a charge from electric fields by putting it inside a hollow conductor. Can we shield a body from the gravitational influence of nearby matter by putting it inside a hollow sphere or by some other means?
8. An astronaut inside a small spaceship orbiting around the earth cannot detect gravity. If the space station orbiting around the earth has a large size, can he hope to detect gravity?
9. The gravitational force between a hollow spherical shell (of radius R and uniform density) and a point mass is F . Show the nature of F vs r graph where r is the distance of the point from the centre of the hollow spherical shell of uniform density.
10. Out of aphelion and perihelion, where is the speed of the earth more and why ?
11. What is the angle between the equatorial plane and the orbital plane of
 - (a) Polar satellite?
 - (b) Geostationary satellite?

Short Answer Type Questions

1. Mean solar day is the time interval between two successive noon when sun passes through zenith point (meridian).
2. Sidereal day is the time interval between two successive transit of a distant star through the zenith point (meridian).

Chapter 7 Physics Answers

Chapter 7: Work and Kinetic Energy. Answers to Even-Numbered Conceptual Questions 2. False. Any force acting on an object can do work. The work done by different forces may add to produce a greater net work, or they may cancel to some extent. It follows that the net work done on an object can be thought of in the following two equivalent ways: (i) The sum of the works done by each individual force; or (ii) the work done by the net force. If the net work done on an object is zero, it follows ...
