## [Chemcad Of Examples](#)

### **Chemcad Of Examples**

This example makes use of CHEMCAD Dynamics. The calculation begins at steady state. At the very beginning of the dynamic simulation, the feed streams are switched with Ramp Controllers, what creates a distortion to steady state. The control system at the reboiler has to maintain possibly constant recirculation flowrate

CHEMCAD 5 has the ability to generate crude oil pseudo-components according to user provided distillation curves. CHEMCAD 5 supports the following blending options: The "Blend" option can generate pseudo-components by averaging distillation curves of all streams under characterization. The "No Blend" option allows characterizing crude oil streams individually, so pseudo-components generated ...
