

LAB REPORT

Pre-lab questions

1. Describe a non-chemical application of Le Chatelier's principle. What is the system in equilibrium? What is the stress? How does the system respond?

2. Consider the equilibrium discussed in the INTRODUCTION. As head chemist at a chemical plant, you are in charge of the amount of PCl_5 that is produced daily. List two ways to produce more PCl_5 .

Application of Le-chatelier's principle The Le Chatelier's principle has a great practical significance for all physical and chemical systems. Applicability of this principle to some of the systems is described below: Liquid - vapour system

CHEM-GUIDE: Le-chatelier's principle and its application

According to Le Chatelier's Principle, predict which way should the reaction shift (left or right). Now to test your prediction, to test tube #2 add a few crystals of solid potassium thiocyanate (KSCN). 3e. What do you observe happening? Record any color changes or other changes you observe. 3f. Do your observations support your prediction based on Le Chatelier's Principle? Explain Fe3 ...

Le Châtelier's Principle

A reversible reaction at equilibrium can be disturbed if a stress is applied to it. Examples of stresses include increasing or decreasing chemical concentrations, or temperature changes. If such a stress is applied, the reversible reaction will undergo a shift in order to re-establish its equilibrium. This is known as Le Chatelier's Principle.

Le Chatelier's principle can be used to predict the behavior of a system due to changes in pressure, temperature, or concentration. Le Chatelier's principle implies that the addition of heat to a reaction will favor the endothermic direction of a reaction as this reduces the amount of heat produced in the system.
