

Very Short Answer Type Questions

Page no: 17

1. What are the conditions for 'something' to be called 'matter'?**Solution:**

The condition for something to be called as matter is that it should occupy space and have mass.

2. Name two processes which provide the best evidence for the motion of particles in matter.**Solution:**

Diffusion and Brownian motion are the two processes which provide best evidence for the motion of particles in matter.

3. Which single term is used to describe the mixing of copper sulphate and water kept in a beaker, on its own?**Solution:**

Diffusion is the term used to describe the mixing of copper sulphate and water kept in beaker on its own.

4. When sugar is dissolved in water, there is no increase in the volume. Which characteristic of matter is illustrated by this observation?**Solution:**

The characteristic of matter illustrated by this observation is that the particles of matter have spaces between them.

5. Even two or three crystals of potassium permanganate can impart colour to a very large volume of water. Which characteristic of particles of matter is illustrated by this observation?**Solution:**

In this observation it displays that each crystal of Potassium Permanganate must be made up of millions of small particles i.e. particles of matter are very small.

6. When an incense stick (agarbatti) is lighted in one corner of a room, its fragrance spreads in the whole room quickly. Which characteristic of the particles of matter is illustrated by this observation?**Solution:**

This illustration shows that the particles are constantly moving in all directions.

7. A piece of chalk can be broken into small particles by hammering but a piece of iron cannot be broken into small particles by hammering. Which characteristic of the particles of matter is illustrated by these observations?**Solution:**

Matter is made up of small particles which attract each other and the attraction differs from substance to substance. Chalk breaks easily on hammering but iron cannot be broken which shows that the particles of iron attract each other with greater force.

Amazon.fr - Chemistry: Matter and Change, Solutions Manual ...

Label a change as chemical or physical. Chemistry is the study of matter—what it consists of, what its properties are, and how it changes. Matter is anything that has mass and takes up space—that is, anything that is physically real. Some things are easily identified as matter—the screen on which you are reading this book, for example.
