

The image shows a Packet Tracer interface with a network diagram on the left and a configuration guide on the right. The network diagram features four switches (S1, S2, S3, S4) connected in a mesh topology. S1 and S2 are connected to S3 and S4. S1 and S2 are also connected to each other. S3 and S4 are connected to each other. Each switch has two access ports (S1-24, S2-24, S3-24, S4-24) and two EtherChannels (S1-1, S2-1, S3-1, S4-1). The configuration guide on the right is titled "PT Activity 3020-43" and provides requirements for configuring the network. It includes sections for "Requirements", "IPv4", "Routing", "VLANs", and "EtherChannels".

Requirements

- Configure subinterfaces to communicate with the switches. You will configure VLANs, trunking, and EtherChannel with PVST. The Internet devices are all preconfigured.

IPv4

- Configure the appropriate dot1Q encapsulation.
- Configure VLAN 99 as the native VLAN.
- Configure the IP address for the subinterface according to the Addressing Table.

Routing

- Configure OSPFv2 using the following requirements:
 - Use process ID 1.
 - Advertise the network for each subinterface.
 - Disable OSPF updates for each subinterface.

VLANs

- For all switches, create VLAN 10, 20, and 99.
- Configure the following static ports for S1 and S2:
 - FD1 - 9 as access ports in VLAN 10
 - FD10 - 19 as access ports in VLAN 20
 - FD20 - F24 and G5/1 - 10 as the native trunk for VLAN 99
- Configure the following static ports for S3 and S4:
 - FD1 - 9 as access ports in VLAN 10
 - FD10 - 20 as access ports in VLAN 20
 - FD21 - F24 and G5/1 - 10 as the native trunk for VLAN 99

EtherChannels

- All EtherChannels are configured as LACP.
- All EtherChannels are statically configured as the native trunk for VLAN 99.
- Use the following table to configure the appropriate switch ports to form EtherChannels.
