The Collection, Preservation, and Identification of Insects

Identify and label your insect. When preserving insects, it's important to know which specific species you are dealing with. This is an especially important part of the procedure if you are preserving insects for scientific purposes. The label should include: the genus and species of the insect, the date and location on which the insect was found, and the name of the collector. Tape the completed label to the outside of the alcohol-filled jar.

I have hitherto made use of the Smithsonian Miscellaneous Collections, No. 261, which is a pamphlet on collecting and preserving insects prepared by Dr. A. S. Packard. This is out of print, and I have been requested by Prof. Goode to prepare for Bulletin 39, U. S. N. M., something that would cover the whole ground and give the more essential information needed for collectors and students of insect life. I have deemed it unnecessary to go too much into detail, but have studied not to omit ...

DIRECTIONS FOR COLLECTING AND PRESERVING INSECTS.

Insect collecting refers to the collection of insects and other arthropods for scientific study or as a hobby. Because most insects are small and the majority cannot be identified without the examination of minute morphological characters, entomologists often make and maintain insect collections. Very large collections are conserved in natural history museums or universities where they are ...

The next step after collecting insects is to preserve them permanently for future display and study. Insect larvae and soft-bodied and extremely tiny specimens are preserved in liquids. Isopropyl alcohol (70 percent) or equivalent is best. All others are preserved on specially designed insect pins. Large insects are mounted directly on pins, while those too small to be placed on pins are mounted on card points (Figure 14).

Holding the specimen by the thorax, force an insect pin through the middle of the thorax (middle body segment) between the wings. The wings may be forced backwards in order to insert the pin far enough through the body. After pinning, it is helpful to force the wings down with forceps. This step makes the specimen easier to manipulate once it is positioned on the mounting board. Next, pin the specimen onto the mounting board, being certain to keep the side of the butterfly, where the wings ...
