

FUN FACTS ABOUT COLLOIDS

Colloids are common materials with one material that is evenly distributed within another material at a very tiny scale.

Some common examples of colloids include milk, fog, jelly, styrofoam, and whipped cream.

Within colloids, a substance ("Substance A") is even distributed within another substance ("Substance B"). Depending on whether these are solid, liquid, or gas, the resulting colloidal materials are called:

		SUBSTANCE A		
		GAS	LIQUID	SOLID
SUBSTANCE B	GAS	NONE All gases are mutually miscible, so they do not form any sort of colloid.	LIQUID AEROSOLS  Fog, hair sprays, clouds	SOLID AEROSOLS  Smoke, air particulates
	LIQUID	LIQUID FOAM  Whipped cream, shaving cream	EMULSION  Milk, mayonnaise, hand lotion	SOL  Pigmented ink, blood, paint
	SOLID	SOLID FOAM  Styrofoam, pumice	GEL  Gelatin, jelly	SOLID SOL  Cranberry glass
