### **Colloidal Silver Generator Constant Current**

SilverGen Ionic - Colloidal Silver Generators Utilize CONSTANT CURRENT Technology. SilverGen ionic/colloidal silver generators are all electronic and do NOT use 9 volt transistor radio batteries or wall transformers used to power small electronic items as most rudimentary units do. These units use technology and circuitry, not hype. This is true cutting edge technology to the rescue.

### **Colloidal Silver Generator | Constant Current Technology ...**

Some colloidal silver generators which do not turn off automatically by electronic sensing, will use a constant current mode at the end of the process using a current limiting system, so that the current cannot exceed a certain amount. These generators often use a timer (internal or external) to switch the unit off after a predetermined time. This timer method produces colloidal silver of an inaccurately determinable strength. The temperature and other factors can effect the strength.

### **Constant Current Colloidal Silver Generator Explained**

You may leave the generator on until the strength of silver in parts per million (PPM) is reached and be assured the particle sizes are uniform and colloidal. Of course we are speaking of practical limits here. This is the secret of repeatable production of colloidal silver. Constant current equals constant size particles.

### **Colloidal Silver Generator with reverse polarity, constant current @1.5ma, mag stirrer**

They don't make safe colloidal silver because they aren't constant current. What happens is that you start with 27 volts and silver electrodes in the distilled water. As the ionic silver is formed in the water it causes the resistance of the water to drop. This makes the current increase and this causes larger particles of silver to form.

My colloidal silver generators are the product of over a year of research and development, trying several different methods of making colloidal silver through electrolysis. What I settled on was a system that uses low frequency (millihertz) AC and constant current. Polarity reverses automatically every few minutes, and the frequency increases with time. This uses the electrodes more ...
